## SUMMARY OF OCTOBER WATER QUALITY SAMPLING

Sampling for October 2016 occurred on the twenty-fourth and was considered a typical base flow collection. Discharge measurements were not collected this month due to low water levels. All sites were at or near stage levels where greater than five discharge measurements have been collected this year, or the streams were not flowing or disconnected. Water quality measurements were made at the ten designated monitoring stations with the exception of LT-1, which was completely dry up and downstream of the station location. All water level gages were operational for the month with the exception of CC-1 and LRC-1. CC-1 was vandalized in August and repaired on October the thirty-first. The data is currently recording, but not transmitting, as a SIM card is being ordered. LRC-1 stopped transmitting on the evening of the twenty-fifth, and was discovered stolen on the thirty-first. Replacement equipment has been ordered, with an unknown delivery date. Mesonet data for Norman shows a total of 0.27 inches of rainfall for the month of October with no precipitation in the 72 hours proceeding and 0.01 inches in the 72 hours following the sampling event.
